

WHAT IS SWS?

WHAT IS SWS?

- 01 SWS Overall goals
- 02 Why SWS
- 03 What is SWS? – Requirements
- 04 What is SWS? – Use case
- 05 What is SWS? – WCU
- 06 What is SWS? – VCI
- 07 What is SWS? – Remote Box

01

SWS OVERALL GOALS

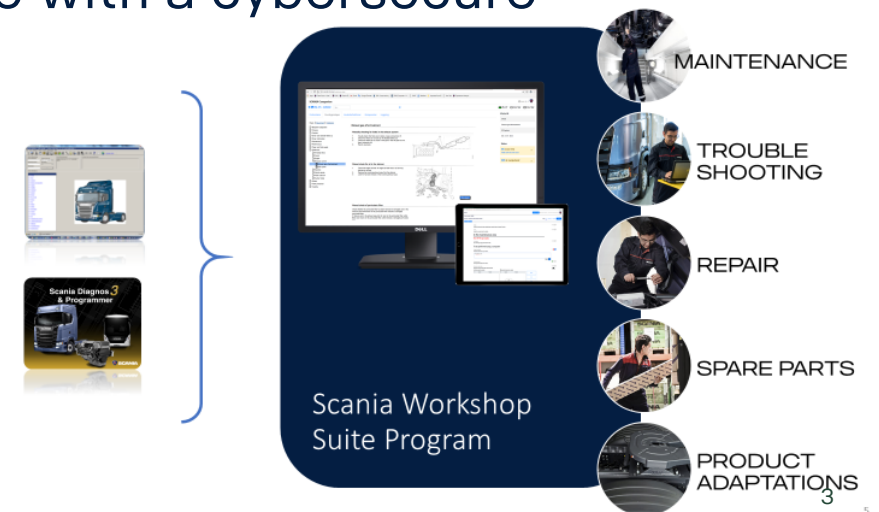

Contribute to a workshop that provides improvement for both Scania and the customer

- IT IS EASY TO DO THE RIGHT THING - INCREASED WORKSHOP EFFICIENCY
 - One single application – Scania Workshop Suite (SWS).
 - First class task oriented information when you need it.
 - Flow-optimised support for workshop production and integration with workshop management tools.
 - Replaces Multi and SDP3.
 - The only way for a workshop to connect to a vehicle with a cybersecure electrical system.

STEP BY STEP IMPLEMENTATION

SWS:01 issue: 1 en-GB

02 **WHY SWS?**

SWS improves efficiency in the workshop

- Improves the coordination between information and functions that are needed to do a complete job.
- Unique integration with Digital Dealer to improve workshop planning, administration and billing preparation.
- The only way to connect to and update Scania cybersecure products.
- SWS is UNECE certified.

WHAT IS SWS? - REQUIREMENTS

Remote Box

USB key

Tablet or computer

WCU, communication unit installed in the workshop

USB key

Internet

Internet, Wi-Fi

Scenario 1: Maintenance in the Scania workshop

Scenario 2: Troubleshooting vehicles and during test drives

Scenario 3: Maintenance in customer workshop or at a different partner

Scenario 5: Adaptation of vehicles to bodywork on bodybuilder premises

Scenario 4: Troubleshooting vehicles or machines out in the field

WHAT IS SWS? – WORKSHOP COMMUNICATOR UNIT (WCU)

- WCU is a local communication unit that connects the workshop VCI units to SWS cloud service.
- At least one WCU is necessary to be able to use SWS. We still recommend having 2 WCUs per workshop.
- Currently, one single WCU can manage multiple VCI units at the same time.
- A USB key is required for the WCU to be able to connect to a vehicle using VCI.
- WCU is a leased tool.

USB key

- A Vehicle Communication Interface (VCI) is connected to the vehicle and connects via a wireless network with WCU and SWS.
- The next generation of VCI has an improved wireless network interface.
- Only VC14 is able to communicate with the new cybersecure vehicles/powertrains.
- VCI4 can also be used for trucks in the L, P, G, R and S series without a cybersecure electrical system, and for buses in the C and K series without cybersecure electrical systems.
- VCI3 can be used for trucks in the P, G, R and T series and L, P, G, R and S series without cybersecure electrical systems, as well as from buses in the F, K and N series and C and K series without cybersecure electrical systems.

WHAT IS SWS? – REMOTE BOX

- Remote Box is mainly intended to perform jobs in SWS outside of the workshops.
- It can be considered a portable WCU with additional communication capability.
- Remote Box is a specially designed built-in computer without a normal monitor.
- Wi-Fi module and telecom module are standard fittings.
- 3 USB ports, of which 1 is used by the USB key. There is also an Ethernet port.
- The Remote Box can also be used as a temporary backup for the WCU in special cases.
- There is an Internet sharing option and it can connect with to up to 8 devices via Wi-Fi.
- A physical licence dongle is required.
- Remote Box is a leased tool.
